Air Pollutants And The Respiratory

Particulate matter, sulfur dioxide, nitrogen oxides, ozone, carbon monoxide, volatile organic compounds (VOCs) and polycyclic aromatic hydrocarbons (PAHs) are among the outdoor air pollutants that are major factors in diseases, causing especially adverse respiratory effects in humans.

Effects of air pollutants on the transmission and severity ...

Chronic exposure to air pollutants not only causes decompensation of pre-existing diseases but also increases the number of new cases of asthma, COPD, and lung cancer, even in rural areas. Air pollutants now rival tobacco smoke as the leading risk factor for these diseases.

Air pollution and the respiratory system

Ozone, formed when nitrogen dioxide and sunlight react, is also a common pollutant. Particulate matter and ozone are known respiratory irritants that can aggravate asthma either by themselves or when combined with other environmental factors. Recent health studies also suggest that particulate matter is a risk factor for cardiovascular disease.

CDC - Healthy Places - Centers for Disease Control and ...

Short-term exposure to air pollution, such as ground-level ozone, can affect the respiratory system because the majority of the pollutants enter the body through a person's airways. Short-term...

How does air pollution affect our health?

In addition to oxygen, the air contains other substances such as pollutants, which can be harmful to

health. The inhalation of those pollutants may have harmful effects on the lungs and other organs of the body. The respiratory system is particularly sensitive to air pollutants because it is made up of a mucous membrane covering its internal surface.

Air Pollutants Affect the Respiratory and ... - Disabled World

INDOOR AIR POLLUTANTS AND RELATIVE SOURCES Epidemiological studies on respiratory health have mainly assessed the effects of exposure to bio-contaminants, such as allergens, moulds and endotoxins, and chemical air pollutants, such as nitrogen dioxide, particulate matter, formaldehyde and VOCs.

Respiratory health and indoor air pollutants based on ...

Acute exposure to the main air pollutants like carbon dioxide, oxides of nitrogen and sulphur, ozone, carbon monoxide, and PM has been connected with increased respiratory risk. A 2016 study by the University of Hong Kong investigated the role of several pollutants in exacerbating COPD by assessing single-pollutant models.

5 Most Common Respiratory Disorders Caused ... - Our Mission

PM10, PM2.5, nitrogen dioxide and sulphur dioxide had negative correlations with Tapp in Secunda – the air contained less of these air pollutants on warmer days. In this study, increasing air...

Air pollution, temperature and ... - The Conversation

Studies have linked particle pollution exposure to a variety of respiratory health effects, including: Respiratory symptoms including cough, phlegm, and wheeze. Acute, reversible decrement in pulmonary function. Inflammation of the airways and lung (this is acute and neutrophilic).

Particle Pollution and Respiratory Effects | US EPA

The most important pollutants are particulate matter (PM), sulfur dioxide (SO 2), nitrogen oxides (NO x), ozone (O 3), and carbon monoxide (CO) [6]. Studies from Europe and America have showed that even short-term changes in air pollution can increase daily mortality [4, 5].

The relation between air pollution and respiratory deaths ...

In children and adults, both short- and long-term exposure to ambient air pollution can lead to reduced lung function, respiratory infections and aggravated asthma. Maternal exposure to ambient air pollution is associated with adverse birth outcomes, such as low birth weight, pre-term birth and small gestational age births.

WHO | Ambient air pollution: Health impacts

Poor indoor air quality has been linked to lung diseases like asthma, COPD and lung cancer. Indoor air pollution is dust, dirt or gases in the air inside a building such as your home or workplace that harms us if we breathe it in. Types of air pollution include: particulate matter (PM) – microscopic particles of dust and dirt in the air

Indoor air pollution | British Lung Foundation

Some studies have shown evidence that indoor air pollution increases the risk of respiratory and atopic diseases even in adult populations 11 – 14, but information on health effects of such pollutants in the elderly is sparse.

Indoor air pollution and respiratory health in the elderly ...

Breathing in air pollutants can irritate your airways and may cause shortness of breath, coughing, wheezing, asthma episodes and chest pain. Exposure to air pollution puts you at risk for lung cancer, heart attacks, stroke and in extreme cases, premature death.

Understanding Air Pollution - Respiratory Health Association

There are some pollutants in the atmosphere, such as particulate matter, nitrogen dioxide, sulfur dioxide, heavy metal, and ozone, which can damage human health. According to the World Health Organization (WHO) study, it is the air pollution that results in the major reason of death and disease for people with respiratory system problems.
