Acids And Bases In Solution

The Arrhenius theory of acids and bases states that “an acid generates H + ions in a solution whereas a base produces an OH – ion in its solution”. The Bronsted-Lowry theory defines “an acid as a proton donor and a base as a proton acceptor”.

Acids and Bases - Definition, Examples, Properties, Uses ...

His original definition stated that acids were compounds that increased the concentration of hydrogen ions (H ⁺) in solution, whereas bases were compounds that increased the concentration of hydroxide ions (OH ⁻) in solutions. Problems arise with this conceptualization because Arrhenius's definition is limited to aqueous solutions, referring to the solvation of aqueous ions, and is therefore not inclusive of acids dissolved in organic solvents.

An acid dissociation constant, K _a, (also known as acidity constant, or acid-ionization constant) is a quantitative measure of the strength of an acid in solution.It is the equilibrium constant for a chemical reaction $\text{A} \rightleftharpoons \text{A}^- + \text{H}^+$ known as dissociation in the context of acid-base reactions.The chemical species HA is an acid that dissociates into A ⁻, the conjugate base of the ...

Acid dissociation constant - Wikipedia

Metal oxides, hydroxides, and especially alkoxides are basic, and conjugate bases of weak acids are weak bases. Bases and acids are seen as chemical opposites because the effect of an acid is to increase the hydronium (H ₃ O ⁺) concentration in water, whereas bases reduce this concentration.

All You Need to Know About Acids, Bases, and pH

Arrhenius defined an acid as a compound that increases the concentration of hydrogen ion (H ⁺) in aqueous solution. Many acids are simple compounds that release a hydrogen cation into solution when they dissolve. Similarly, Arrhenius defined a base as a compound that increases the concentration of hydroxide ion (OH ⁻) in aqueous solution.
