How To Make A 20-Foot Wood Beam - JT's World Of DIY

A steel I-beam is a type of joist or girder made from structural steel. I-beams are used as major support trusses in

building, to ensure that a structure will be physically sound. Steel is one of the most common materials used to make I-beams, since it can withstand very heavy loads, although other materials, such as aluminum, are sometimes used. Composite I-beams are also available, with layers of other materials encasing the outside of the steel to disguise it as something else, such as wood.

What is a Steel I-Beam? (with pictures)

Place the the appropriate dimensional lumber for the beams on the sawhorses. For each beam use the tape measure to

measure the dimensional lumber the required length. Mark the length with a V pointing to the position of the saw line. Use the speed square to draw a straight line across the width of the lumber. Cut the lumber for the beams.
