CODING THEORY Application of Coding Theory

Solution Of Coding Theory By

Coding theory is the branch of mathematics concerned with transmitting data across noisy channels and recovering the message. Coding theory is about making messages easy to read: don't confuse it with cryptography which is the art of making messages hard to read! We assume that our message is in the form of binary digits or bits, strings of 0 or 1. We have to transmit these bits along a channel (such as a telephone line) in which errors occur randomly, but at a predictable overall rate.

Various techniques used by source coding schemes try to achieve the limit of Entropy of the source. $C(x) \geq H(x)$, where $H(x)$ is entropy of source (bitrate), and $C(x)$ is the bitrate after compression. In particular, no source coding scheme can be better than the entropy of the source. Example. Facsimile transmission uses a simple run length code. Source coding removes all data superfluous to the need of the transmitter, decreasing the bandwidth required for transmission.
