A Fuzzy Ontology Based Semantic

A fuzzy ontology may be informally defined as an ontology that expresses vague knowledge using a fuzzy set (fuzzy concept) namely degree-vagueness and fuzzy relation and properties namely combinatory-vagueness. Because a crisp ontology is a special case of a fuzzy ontology, in which all relation and property degrees are equal to 1, fuzzy ontology-based CBR retains the characteristics of the traditional ontology-based CBR paradigm.

Ontology is represented as a graph-based model that reflects semantic relationship between concepts, with which a semantic

similarity matrix of concepts that exploits semantic relation of the ontology is defined. Based on conceptual matrix a document can be represented to a semantic fuzzy set. Then similarity between documents is computed with fuzzy matching measure. The result of this process may make documents not similar with vector representation become similar.
