Durability is one of the most significant technical barriers to successful commercialization of polymer electrolyte membrane (PEM) fuel cells for practical vehicular applications. It is determined by the aging (degradation) and malfunction of various components during the long-term operation. Therefore, understanding the mechanisms of degradation modes in different components is crucial to the development of high-performing and long-lasting PEM fuel cells.

A review of polymer electrolyte membrane fuel cell ...

The durability of a polymer electrolyte membrane fuel cell depends in part on the operational stability of its solid electrolyte, which is typically a perfluorosulphonic acid (PFSA) ionomer membrane. In simple terms, degradation may compromise the ability of the membrane to separate the reactant gases, and therefore lead to lifetime limiting failure.

Estimating the Durability of Polymer Electrolyte Fuel Cell ...

1. Introduction. After decades of fruitful research efforts, polymer electrolyte fuel cells (PEFCs) have attained performance that makes them suitable for commercialization for stationary and automotive power generation applications [1,2]. At the current status, the most important limiting factor to the widespread commercialization of acidic PEFC devices for numerous applications is the use of ...
