Cell Organelles - Types, Structure and their Functions

Each organelle has different responsibilities for producing materials used elsewhere in the cell or body. Here are the key organelles and what they do: Centrosome: Microtubules sprout from this structure, which is located next to the nucleus and is composed of two centrioles — arrays of microtubules — that function in separating genetic material during cell division.

Organelles and Their Functions - dummies

In cell biology, an organelle is a specialized subunit, usually within a cell, that has a specific function. The name organelle comes from the idea that these structures are parts of cells, as organs are to the body, hence organelle, the suffix -elle being a diminutive. Organelles are either separately enclosed within their own lipid bilayers (also called membrane-bound organelles) or are ...
