Geometry & Measurement, Grade 1 *Kumon Pub North America Limited***Bio-Inspired Innovation and National Security** *NDU Press*

Despite the vital importance of the emerging area of biotechnology and its role in defense planning and policymaking, no definitive book has been written on the topic for the defense policymaker, the military student, and the private-sector bioscientist interested in the "emerging opportunities market" of national security. This edited volume is intended to help close this gap and provide the necessary backdrop for thinking strategically about biology in defense planning and policymaking. This volume is about applications of the biological sciences, here called "biologically inspired innovations," to the military. Rather than treating biology as a series of threats to be dealt with, such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic advantage over adversaries. These opportunities range from looking at everything from genes to brains, from enhancing human performance to creating renewable energy, from sensing the environment around us to harnessing its power.

Prealgebra

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

Unholy Trinity *Marshall Cavendish International Asia Pte Ltd*

New in this edition: REPENTANCE ON DEATH ROW. AN EXCLUSIVE INTERIVEW WITH SISTER GERARD, THE NUN WHO COUNSELLED THE TWO WOMEN ACCOMPLICES Singapore's most bizarre murder case drew to a close on 25 November 1988 when Adrian Lim, his wife Catherine Tan Mui Choo and mistress Hoe Kah Hong were hanged at Changi Prison. After two children were found dead within a fortnight in 1981, the Toa Payoh 'ritual killings' proved shocking for the revelations about self-styled spirit medium Adrian Lim's greed, depravity and cruelty. The confidence trickster persuaded numerous women that he possessed supernatural powers and they paid him with money, valuables and sex. He tortured his victims with primitive electric shock treatments that left one man dead. He was a monster who beat, slapped and kicked his women to make them fear and obey him as he acted out his every lustful perversion. He turned his wife into a prostitute and stripper. He made his mistress lure the children to their deaths. Sentencing all three to hang, the trial judges said of Adrian Lim: "We are revulsed by his abominable and depraved conduct."

Math from Three to Seven**The Story of a Mathematical Circle for Preschoolers** *American Mathematical Soc.*

This book is a captivating account of a professional mathematician's experiences conducting a math circle for preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should they learn first? How hard should they work? Should they even "work" at all? Should we push them, or just let them be? There are no correct answers to these questions, and the author deals with them in classic math-circle style: he doesn't ask and then answer a question, but shows us a problem--be it mathematical or pedagogical--and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about things he tried with a half-dozen young children. Mathematicians, psychologists, educators, parents, and everybody interested in the intellectual development in young children will find this book to be an invaluable, inspiring resource. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).
