Biomechanical examination of the foot - PubMed

Foot assessment is a common approach in clinical practice for classifying foot type with a view to identifying possible aetiological factors relating to injury and prescribing therapeutic interventions. This approach is underpinned by a contextual model of the foot whereby structural alignment, or position of the foot, is used to infer characteristics of dynamic foot function, and theoretically establish injury mechanisms leading to

pathology.

Biomechanical Exam Form - The American College of Foot ...

A biomechanical assessment involves an examination of the lower limbs, looking at their structure, alignment, strengths and weaknesses. The foot is a complex structure of 28 different bones, 214 ligaments and 38 muscles, bearing our body weight as we walk every day. The examination is not focused simply upon the foot but includes the pelvis, legs and knees, assessing the relationship between them.

Foot biomechanics is the study of how the foot moves during the gait cycle. You wouldn't build a house without getting the foundations right, and it is the same with foot biomechanics and sports

injuries.

Foot Biomechanics - Gait Analysis, Overpronation & Supination

In the proposed draft of the changes to the CPME 320 document, requirement 6.0 designates a competency in biomechanics, which does outline some forms of treatment: “Perform biomechanical examination and manage patients with lower extremity disorders utilizing a variety of prosthetics,

orthotics, and footwear.” 1

Proposed CPME 320 Changes May Dramatically Reduce Required ...

A biomechanical exam for children is a comprehensive assessment of the way the child’s body functions while walking. Both static and dynamic tests are conducted to investigate the body’s osteo-articular and muscular functions. A biomechanical exam may be conducted as soon as the child has begun to walk. Normal function is assessed differently in children compared to adults.
