Introduction To Netconf And Yang

NETCONF/YANG provides a standardized way to programmatically update and modify the configuration of a network device. To break this down further. YANG is the modelling language that describes the configuration changes. Whereas NETCONF is the protocol that applies the changes to the relevant datastore (i.e running, saved etc) upon the device.

An Introduction to NETCONF/YANG

The NETCONF protocol does not standardize the data inside the Content layer. Instead, NETCONF data models may be designed by anyone using the YANG Data Modeling Language which standardizes the model structure. Network device manufacturers implementing the NETCONF interface on their hardware will need

to embed YANG data models into their software.

NETCONF and YANG Tutorial part 1 : Introduction

Cisco has recently introduced NETCONF/YANG support across the enterprise network portfolio. This capability is available in the 16.3 XE code for routers and switches. NETCONF/YANG allows programmatic access to network devices using structured data. I have had a number of questions from customers looking to get started with NETCONF/YANG, which I will address here.

Getting Started with NETCONF/YANG - Part 1 - Cisco Community

In terms of SDN, NETCONF is often referenced as a southbound API from an SDN controller to network agents like switches and routers due to its potential for supporting multi-vendor environments. NETCONF and its role in SDN will become even more interesting with the recent announcement of Cisco's plan to acquire Tail-f Systems. Tail-f's ConfD uses NETCONF and YANG modeling language to provide SDN-ready configuration and operational data management as well as supporting multi-vendor on ...

NETCONF: Introduction To An Emerging Networking Standard ...

In order for NETCONF to be useful as a network-wide protocol, it must have a common data model ! Simply wrapping CLI in XML is not enough as each vendor has its own CLI ! YANG provides the

NETCONF, YANG, RESTCONF - Cisco

RESTCONF borrows the idea of Create-Read-Update-Delete operations on resources from REST and maps them to YANG models and datastores. There is a direct relationship between NETCONF operations and RESTCONF HTTP verbs: Both RESTfullness and the ability to encode data as JSON make RESTCONF a very attractive choice for application developers.
