Cross Connections And Backflow Prevention

A cross connection is a connection between a potable drinking water pipe and a non-potable source. For example: you’re planning to spray weed killer on your lawn. You hook up your hose to the faucet on your house and to the sprayer containing the weed killer. If the water pressure drops at the same time you turn on the hose, the pressure change may cause the chemical in the sprayer to be sucked back into your home’s plumbing system through the hose.

Backflow Prevention and Cross Connection

A cross connection is any potential or actual physical connection between potable water and a non potable fluid. These connections can range in severity from extreme hazards (such as sewage or chemicals) to aesthetic problems (e.g., juice, dirt, etc.). Without protective devices, (referred to as backflow prevention assembly devices), the potable water supply can become contaminated by any customer in the system.
