The Influence Of Knitted Fabrics

References. Abstract. This paper studies the influence of fabric's structure on the thermal and moisture management properties of knitted fabrics made of two types of yarns with thermo-regulating effect: Coolmax® and Outlast®. The main purpose of this study was the selection of the most adequate fabric, to be used in summer and winter sportswear. The results demonstrated that some properties, such as, thermal properties, diffusion ability, air and water vapor permeability are influenced by ...

The main influence on the electrostatic properties of tested fabrics has the arrangement of conductive carbon core yarns inserted in the knits. In order to evaluate the comfort of knitted fabrics the air permeability, hygroscopicity, time of absorption and drying degree of fabrics were evaluated.

The Influence of Three-Layer Knitted Fabrics' Structure on ...

Knitted fabrics generally have lower modulus and dimensional stability than woven fabrics due to the loop formation in the structure. However, knitted structures can conform to complex shapes more easily without developing creases, and knitting is a more flexible process in terms of forming preshaped structures.
