The Pythagorean theorem, involving the relationships between the sides of a right triangle, is one of the most famous geometry theorems. Many proofs have been generated to show the relationship, $a^2 + b^2 = c^2$. The a side and the b side are the legs on either side of the right angle, and the c side is the hypotenuse. The Pythagorean theorem is a simple formula which uses the squared value of a and b; for example "a=3 and b=4, what is the

value of c ?" you square a ($3^2=9=a$) and b ($4^2=16=b$) and add the 2 values ($9+16=25$) to get to c . To complete the question, you have to square root c 's value (square root of $25=5$) because the formula says c^2 and not just c .
