Regression and Multilevel ...

In statistical modeling, regression analysis is a set of statistical processes for estimating the relationships between a dependent variable and one or more independent variables. The most common form of regression analysis is linear regression, in which a researcher finds the line that most closely fits the data according to a specific mathematical criterion. For example, the method of ordinary

least squares computes the unique line that minimizes the sum of squared distances between the true d

Regression analysis - Wikipedia

In summary, running a regression analysis is just the start of your investigation in assessing whether some data has a relationship with other data. With that context, here are ways you can ensure you come up with an analysis that is honest and helps you figure out your next steps.
