Environmental Health Risk V Wit
Health problems related to the environment have become a major source of concern all over the world. The health of the population depends upon good quality environmental factors, including air, water, soil, food and many others. There is a need to establish

measures that can eliminate or considerably reduce hazardous factors from the human environment to minimise the associated health risks.

Environmental health is one of the largest fields within public health because of the myriad ways external forces can impact how we eat, live, and grow. These forces can be about addressing our natural environment (as in the case for clean water or sanitation), but they can also be the consequence of human beings' actions—including societal norms.
