Cantilever Beam Worked Example. Consider a cantilever circular rod 200 mm long and 4.97 mm diameter with a 1 kg mass on one end and a horizontal force (F_x) of 30 N applied to it. Calculate the forces and Von Mises stress in the rod. Average shear stress is frequently used in hand calculations. For a

round rod the maximum shear stress will actually be $4/3 \times F/A$ with the peak stress in the centre of the rod.
