**Equilibrium Thermodynamics / Edition 3 by C. J. Adkins ...**  
Equilibrium Thermodynamics is the systematic study of transformations of matter and energy in systems in terms of a concept called thermodynamic equilibrium. The word equilibrium implies a state of balance. Equilibrium thermodynamics, in origins, derives from analysis of the Carnot cycle. Here, typically a system, as cylinder of gas, initially in its own state of internal thermodynamic equilibrium, is set out of balance via heat input from a combustion reaction.

**Equilibrium thermodynamics - Wikipedia**  
Thermodynamic equilibrium is an axiomatic concept of thermodynamics.It is an internal state of a single thermodynamic system, or a relation between several thermodynamic systems connected by more or less permeable or impermeable walls.In thermodynamic equilibrium there are no net macroscopic flows of matter or of energy, either within a system or between systems.
