The electric current (moving electrical charges) in the wire creates a magnetic field surrounding the wire (see Figure L10.1). The magnetic field surrounding the wire is usually weak, but it can still

have an effect on other magnets or materials. Coiling the wire will help concentrate the magnetic field on the inside of the coil (see Figure L10.2).

What is an electromagnet? An electromagnet is a magnet that runs on electricity. Unlike a permanent magnet, the strength of an electromagnet can easily be changed by changing the amount of electric current that flows through it. The poles of an electromagnet can even be reversed by reversing the flow of electricity.
