Rotodynamic - Hydraulic Institute

A rotodynamic pump is a kinetic machine in which energy is continuously imparted to the pumped fluid by means of a rotating impeller, propeller, or rotor. The most common types of rotodynamic pumps are axial flow, mixed flow, and centrifugal pumps (radial flow). Centrifugal pumps are the most common rotodynamic pump used today because they serve a wide range of applications and have a long history of safe and reliable operation.

About Rotodynamic Pumps - Hydraulic Institute

A rotodynamic pump is a pump that uses the rotation of an impeller or propeller to impart velocity to a liquid. Pumps that use rotation to move a liquid are commonly referred to as centrifugal pumps. However, in some cases, the use of the term centrifugal to describe these pumps is inaccurate.

Description more details. Scope of Standard: ANSI/HI 9.6.7-2015 outlines the method for predicting performance of rotodynamic pumps in Newtonian liquids of viscosity greater than water. The standard applies to single and multi-stage rotodynamic pumps having radial impellers $n_s = 60$, ($N_s = 3000$), handling liquids exhibiting Newtonian behavior, and a kinematic viscosity greater than 1 and less than 4000 centistokes.

New HI Document Provides Guidance on ... - Pumps & Systems

A rotodynamic pump is a kinetic machine in which energy is continuously imparted to the pumped fluid by means of a rotating impeller, propeller, or rotor, in contrast to a positive displacement pump in which a fluid is moved by trapping a fixed amount of fluid and forcing the trapped volume into the pump's discharge. Examples of rotodynamic pumps include adding kinetic energy to a fluid such as by using a centrifugal pump to increase fluid velocity or pressure.
