Intelligent Vehicular Network and Communications: Fundamentals, Architectures and Solutions begins with discussions on how the transportation system has transformed into today’s Intelligent Transportation System (ITS). It explores the design goals, challenges, and frameworks for modeling an

ITS network, discussing vehicular network model technologies, mobility management architectures, and routing mechanisms and protocols.

Intelligent Vehicular Networks and Communications ...

In the last two decades, vehicular ad hoc networks (VANETs) were the topic of many research studies. The emergence of multiple wireless access technologies and the wide number of applications provided by VANET explain the significant interest in this field. Enabling communication between vehicles and infrastructure equipment (e.g. roadside units, cameras) provides drivers and traffic authorities with information related to traffic conditions and incidents.

Vehicular Communications and Networks: Architectures ...

VANETs were first mentioned and introduced in 2001 under "car-to-car ad-hoc mobile communication and networking" applications, where networks can be formed and information can be relayed among cars. It was shown that vehicle-to-vehicle and vehicle-to-roadside communications architectures will co-exist in VANETs to provide road safety , navigation, and other roadside services.

Survey on the Internet of Vehicles: Network Architectures and Applications. Abstract: The vehicular ad hoc network (VANET) has been widely used as an application of mobile ad hoc networking in the automotive industry. However, in the 5G/B5G era, the Internet of Things as a cutting-edge technology is gradually transforming the current Internet into a fully integrated future Internet.

Current generation vehicular network is mostly developed using the DSRC and IEEE802.11p standards. For the next generation vehicular networks, the 3GPP based LTE standard is considered as one of the key wireless networking technologies for the V2X communication systems.
