The four fundamental concepts used in mechanics are space, time, mass and force¹. It is not easy to define what these concepts are.

2.1 The Fundamental Concepts and Principles of Mechanics

The Dynamics is that branch of Engineering Mechanics which deals with the forces and their effects, while acting upon the bodies in motion.

10 SOME BASIC TERMS USED IN MECHANICS

The followings are the basic terms which are

used in mechanics:

Mass: The quantity of the matter possessed by a body is called mass. The mass of a body can not change unless the body is damaged and part of it is physically separated. Length: It is a concept to measure linear distances. Time: Time is the measure of succession of events.

Most simply it can be defined as 'the cause of change in the state of motion of a particle or body'. It is of course, the product (multiplication) of mass of the particle and its acceleration. Force is the manifestation of action of one particle on the other. It is a vector quantity.

Engineering Mechanics: LESSON 2. FORCE SYSTEM

Next, the basic governing equations of continuum mechanics are presented, particularly the balance equations for mass, linear and angular momentum and

energy. After a cursory introduction into the principles of material theory, the constitutive equations of linear elasticity are presented for small deformations.

Engineering Mechanics - HZG

Basic Mechanics. The branch of physics that deals with the action of forces on matter is referred to as mechanics. All considerations of motion are addressed by mechanics, as well as the transmission of forces through the use of simple machines.

Basic Mechanics - Rice University

The topic of mechanics is divided in two parts: statics and dynamics; then it is further divided into topics we
