Electromagnetic waves are waves that consist of vibrating electric and magnetic fields. Like other waves, electromagnetic waves transfer energy from one place to another. The transfer of energy by electromagnetic waves is called electromagnetic radiation. Electromagnetic waves can transfer energy through matter or across empty space.

Electromagnetic Waves Electromagnetic waves are made by vibrating electric charges and can travel through space where matter is not present. • Instead of transferring energy from particle to particle, electromagnetic waves travel by transferring energy between vibrating electric fields and magnetic fields.

Section 1: What are electromagnetic waves?

In the differential form formulation on arbitrary space times, $F = 1/2 F_{\alpha\beta} dx^\alpha \wedge dx^\beta$ is the electromagnetic tensor considered as a 2-form, $A = A_\alpha dx^\alpha$ is the potential 1-form, $J = J^\alpha dx^\alpha$ is the current 3-form, d is the exterior derivative, and $\star$ is the Hodge star on forms defined (up to

its orientation, i.e. its sign) by the Lorentzian metric of spacetime.
