In general, data structures are built from
 four data types: scalar floats and
 symbols, arrays (whose elements share
 another, specified template) and lists
 (whose elements may have a variety of
 templates). The contents of a Pd window
 themselves form a list. Pd's correlate of
 Max's "table" object is implemented as a
 top-level array whose elements are
 scalars containing a single floating-point

Filters A filter works by allowing some frequencies through, while reducing or eliminating others. There are three different kinds of basic filters to work with in Pd: the Low Pass Filter, the High Pass Filter and the Band Pass Filter, as well as a Voltage Controlled Filter which can be controlled using some of the LFO techniques we have already looked at.

The main thing to keep in mind when starting to learn Pure Data is that audio and everything else is just numbers inside the computer, and that often the

computer doesn't care whether the numbers you are playing with represent text, image, sound or other data.
