Perspectives on Biomarker and Surrogate Endpoint ...

The first reason for a biomarker to fail as a surrogate endpoint is that the biomarker does not lie in the causal pathway by which the disease influences the clinical endpoint, so an intervention's effect on the biomarker will not provide a reliable estimate of the intervention's clinical efficacy (as shown in Figure 7-1A), Dr. Fleming said. An example of this

Fleming noted that validated surrogate endpoints are extremely rare; however, he added that there are many other uses of

biomarkers that are critically important, including the diagnosis and prognosis of disease, informing patient-specific therapeutic strategies, primary endpoints in proof-of-concept studies or screening trials, patient enrichment, and as additional measures of biological activity in phase III clinical trials.
