Statistical And Machine Learning Data

Machine learning is built upon a statistical framework. This should be overtly obvious since machine learning involves data, and data has to be described using a statistical framework. However, statistical mechanics, which is expanded into thermodynamics for large numbers of particles, is also built upon a statistical framework.

The Actual Difference Between Statistics and Machine Learning

Statistics, a subfield of mathematics can be defined as the practice or science of collecting and analyzing numerical data in large quantities. On the other hand, Machine Learning is a subset of Artificial Intelligence that uses algorithms to perform a specific task without using explicit instructions.

Statistics and Machine Learning Toolbox Documentation

Machine learning works on iterations where computer tries to find out patterns hidden in data. Because machine does this work on comprehensive data and is independent of all the assumption, predictive power is generally very strong for these models. Statistical model are mathematics intensive and based on coefficient estimation.

Machine Learning vs. Statistical Modeling

Our research enables the extraction of insights and construction of scientifically rigorous predictive models from computational, experimental, and observational data. We devise techniques for automating data analysis and inference and conduct fundamental research in statistical and stochastic methods. We develop unsupervised, (semi)supervised, and reinforcement learning models and methods for regular and irregular domains incorporating domain knowledge, physical models, and constraints.

VERY BASIC OVERVIEW OF STATISTICS AND MACHINE LEARNING

Statistics Both Statistics and Machine Learning create models from data, but for different purposes. Statisticians are heavily focused on the use of a special type of metric called a statistic. These statistics provide a form of data reduction where raw data is converted into a smaller number of statistics.
