Asexual Reproduction Mcgraw Hill Education

There are three main types of plant reproduction: (1) vegetative reproduction, in which a vegetative organ forms a clone of the parent; (2) asexual reproduction, in which reproductive components undergo a nonsexual form of production of offspring without genetic rearrangement, also known as apomixis; and (3) sexual reproduction (Fig. 1), in which meiosis (reduction division) leads to formation of male and female gametes that combine through syngamy (union of gametes) to produce offspring.

Plant reproduction - AccessScience from McGraw-Hill Education

The formation of new individuals, which may occur by asexual or sexual means. All animals must reproduce asexually or sexually to create new individuals of their species. In asexual reproduction, a single parent can produce offspring that are genetically identical to itself. Most animals also use sexual reproduction as a means of maintaining the genetic diversity of their species.

In asexual reproduction, one parent organism produces offspring without meiosis and fertilization. Offspring produced by asexual reproduction inherit all of their DNA from one parent. Therefore, they are genetically the same as each other and their parent. You have seen the results of asexual reproduction if you have ever seen mold on bread or fruit.

Reproduction of Organisms Chapter Test A Multiple Choice

Throughout the plant kingdom, specially differentiated or modified cells, groups of cells, or organs have, during the course of evolution, come to function as organs of asexual reproduction. These structures are asexual in that the individual reproductive agent develops into a new individual without the union of sex cells . A number of examples of special asexual agents of reproduction from several plant groups are in this section. Airborne spores characterize most nonflowering land plants ...
