Because PNA-DNA hybrids are much more stable than DNA-DNA hybrids, we anticipated that within the living cell, the PNA probe would selectively and competitively form a heteroduplex with telomeric DNA. To introduce the PNA probe into living U2OS cells we made use of glass beads (McNeil and Werder, 1987).

PROBLEMS OF CULTIVATION OF MAMMALIAN CELLS IN FERMENTORS. In the past few decades there have been great interests in the cultivation of mammalian cells, including human cells in fermentors for the production of biologics for diagnostic and therapeutics used in human health care. This is not a new direction in the progression of fermentation technology but a natural anticipated progress in the field of fermentation technology.

In this study, by using two SM-binding probes, lysenin and EqtII, we examined the subcellular localization of SM in COS-1 cells. The specificity of these probes toward SM in vivo was verified by several approaches that include SMS knockdown, SMase treatment, and treatment with an inhibitor of sphingomyelin synthesis.

Using roGFPs, we were unable to demonstrate any response of the redox probes to two growth factor stimuli reported to generate cellular H_2O_2 : EGF in NR6 cells or LPA in HeLa cells. Targeting the probe to the plasma membrane or mutating the roGFPs to enhance sensitivity to H_2O_2 failed to uncover sensitivity to EGF in NR6 cells or by LPA in HeLa cells, even though the modified probes still reacted to exogenous oxidants.

The analysis of protein lipidation, however, is challenging due to the relatively few methods for the detection of lipid-modified proteins. Wortmannin is a specific inhibitor of the phosphatidylinositol (PI) 3-kinase that has been shown to block endocytosis in mammalian cells. 27 It also has been shown to be active in plant cells, where it inhibits protein sorting to the vacuole through action on both the PI 3- and PI 4-kinases. 28 In the cells treated with Wortmannin, the signal of 2 was detected, whereas the signal of 1 was faintly observed (Fig. 4b and Fig. S13, ES†).
