There are three critical issues of water security – access, pollution, and efficiency – that can be addressed through better infrastructure. The challenge of implementing engineering solutions is identifying the appropriate technology and overcoming region-specific political, social, and economic hurdles. For each issue, Mission 2017 identifies the necessary technology and the steps to link new technology with common practice.

Water Resources Engineering | Walter P Moore

Water resources engineering is the quantitative study of the hydrologic cycle -- the distribution and circulation of water linking the earth's atmosphere, land and oceans. Surface runoff is measured as the difference between

precipitation and abstractions, such as infiltration (which replenishes groundwater flow), surface storage and evaporation. Applications include the management of the urban water supply, the design of urban storm-sewer systems, and flood forecasting.
