Monophyletic groups (clades) An important goal of modern systematics is to apply scientific names only to groups of species that are monophyletic (from the Greek monos = one or single, and phylon = kind or tribe). Cladistics is now accepted as the best method available for phylogenetic analysis, for it provides an explicit and testable hypothesis of organismal relationships. The basic idea behind cladistics is that members of a group share a common evolutionary history, and are "closely related," more so to members of the same group than to other organisms.
