Slotted Waveguide Array Antenna

Slotted antenna arrays used with waveguides are a popular antenna in navigation, radar and other high-frequency systems. They are simple to fabricate, have low-loss (high antenna efficiency) and radiate linear polarization with low cross-polarization.

Antennas: The Slotted Waveguide Antenna

A slotted antenna is used as an antenna in microwave radar systems. These types of antennas have a metal surface resembling a flat plate with slots. These slots are in the form of circular or rectangular holes. The size of the slot, its shape, and the driving frequency will influence the radiation pattern of the antenna.

Slot antenna - Wikipedia

Slot radiators or slot antennas are antennas that are used in the frequency range from about 300 MHz to 25 GHz. They are often used in navigation radar usually as an array fed by a waveguide. But also older large phased array antennas used the principle because the slot radiators are a very inexpensive way for frequency scanning arrays.
