The efferent visual system is composed of the ocular motor pathways ("infranuclear" pathways) that originate from cranial nerve nuclei III, IV, and VI of the midbrain and brainstem. These three cranial nerves control the extraocular muscles of the eye.

Afferent fibers provide sensory input, transmitting impulses from the periphery to the CNS, while the efferent fibers give motor output, sending impulses from the CNS to the periphery.

Cranial nerves - Anatomy

This cranial nerve contains special visceral efferent (SVE) neurons that conduct impulses to the skeletal muscles of the face, jaw, and neck via three branches.
