When you are exploiting a suid program (e.g., for local privilege escalation) your exploit may work under gdb, yet you don't obtain any new privileges. First and for all, a "suid program" is a program that a normal user can execute, but runs under root privileges (to be precise it runs as the user that owns the program).

Mathy Vanhoef, PhD: Common Pitfalls When Writing Exploits

For RE (which is my main area of interest) it mostly boils down to running a binary or jumping into gdb on occasion and for that I didn't need anything fancy. But, I've recently started to teach myself some pwn and for that the only logical choice is to use pwntools.. The usual starting script is to create a local context and attach gdb from pwntools. ...
