The Carleson Hunt Theorem On

Carleson's theorem is a fundamental result in mathematical analysis establishing the pointwise almost everywhere convergence of Fourier series of L^2 functions, proved by Lennart Carleson. The name is also often used to refer to the extension of the result by Richard Hunt to L^p functions for $p \in (1, \infty]$ (also known as the Carleson-Hunt theorem) and the analogous results for pointwise almost everywhere convergence of Fourier integrals, which can be shown to be equivalent by transference ...

The Carleson-Hunt Theorem on Fourier Series (Lecture Notes ...

The Carleson's famous paper in 1966 proved that the Fourier series of square-integrable functions converges almost everywhere. As indicated in Hunt's paper in 1967, Carleson's method can be modified to deal with the functions in L^p -space with $p > 1$. In addition to Carleson's work, Fefferman provides another approach to solve this problem in 1971.

THE CARLESON HUNT THEOREM

Carleson theorem For a function in $L^2(0, 2\pi)$ its trigonometric Fourier series converges almost everywhere. This was stated as a conjecture by N.N. Luzin and proved by L. Carleson. The statement of Carleson's theorem is also valid for functions in L^p for $p > 1$ (see).

Theorem (Hunt, 1968) If $f \in \bigcup_{p > 1} L^p(\mathbb{T})$ then $(S_n f)(x) \rightarrow f(x)$ for almost all $x \in \mathbb{T}$. There's an obvious sense in which Carleson's and Hunt's theorems can't be improved: we can't change 'almost all' to 'all', simply because changing a function on a set of measure zero doesn't change its Fourier coefficients.

Carleson-Hunt Theorem on $\mathbb{R}$. If $p \in (1, \infty)$ and $f \in L^p(\mathbb{R})$ then $f(x) = \lim_{A \rightarrow \infty} \int_{-A}^A f(x) dx$ almost everywhere.

This seems clearly wrong to me, because if $p > 2$ then $f^\wedge$ is just a tempered distribution, so those integrals are undefined.
