Trends of Periodic Properties in Periodic Table

As you go down a group (a column) in the Periodic Table, the atomic radius starts to increase. This is because we're adding more layers of electrons, smothering the positive protons at the centre. The outermost electrons

(known as the valence electrons) start to get further away from the nucleus.

Understanding the trends of the Periodic Table: GCSE 9-1

Periodic trends are specific patterns in the properties of chemical elements that are revealed in the periodic table of elements. Major periodic trends include electronegativity, ionization energy, electron affinity, atomic radii, ionic radius, metallic character, and chemical reactivity. Periodic trends from the changes in the atomic structure of the chemical elements within their respective periods (horizontal rows) and groups in the periodic table.

Periodic trends - Wikipedia

Periodic Table: Trends Across Period 2 Chemistry Tutorial Key Concepts. The horizontal rows of the periodic table are called periods. Period 2, or the second period, refers to the second row from the top of the periodic table. The elements in period 2 of the periodic table are:

Periodic Table: Trends Across Period 2 Chemistry Tutorial

Periodic trends are specific patterns that are present in the periodic table that illustrate different aspects of a certain element, including its size and its electronic properties. Major periodic trends include: electronegativity,

ionization energy, electron affinity, atomic radius, melting point, and metallic character.

When we move down a group in the periodic table, more energy levels are added, and so valence electrons would become further and further away from the positive nucleus. This causes the attraction between valence electrons and the nucleus to decrease, something known as the shielding effect.
