Perl Tk

The Perl/Tk module, also known as pTk or ptk, is a Perl module designed to create widgets and other commonly used graphical objects to form a graphical user interface (GUI). Using the module to create a GUI enhances the look and feel of a program and helps the end user navigate through the program and its functions.

Learn the Perl/Tk module, Part 1: The basics of Perl/Tk

Any Perl/Tk application starts by creating the Tk MainWindow. You then create items inside the MainWindow, and/or create new windows called Toplevel s that also contain child items, before starting the MainLoop, which is the last logical statment in your program. You can also create more items and windows while you're running, using callbacks.
