Based on the spin amplitude conservation idea including the zero-point fluctuation amplitude, this book shows that the entire

temperature and magnetic field dependence of magnetization curves, even in the ground state, is determined by the effect of spin fluctuations.

The spin fluctuation contribution is obtained by subtracting the resistivity of a suitable, "normal" metal (Ag in the Pd case, Th for Np and Pu). In local-moment systems, the "spin disorder scattering" is saturated at high temperatures. Evidently, such saturation may occur in itinerant-electron systems as well.
