Although many inverters work as standalone units, with battery storage, that are totally independent from the grid, others (known as utility-interactive inverters or grid-tied inverters) are specifically designed to be connected to the grid all the time; typically they're used to send electricity from something like a solar panel back to the grid at exactly the right voltage and frequency. That's fine if your main objective is to generate your own power.

There are two types of power inverters. One generates a pure sine wave (PSW) and the other generates a modified sine wave (MSW). Some electrical devices work fine with one but not the other, so it’s important to get the right power inverter for your needs. In low-power environments (smartphones, tablets, laptops), it's not a significant problem.
