Basic Geometric Constructions. - Instructables

Obviously, a compass is mainly used for constructing a circle centered at any given point with any given radius. There are two types of compasses: Modern compass - We can keep the opening fixed when the compass leaves the plane and carry to another location for construction. Euclidean (or collapsible) compass - The compass "forgets" the width of the opening when the compass leaves the plane i.e. we cannot keep the

opening fixed.

Ruler and Compass Constructions are covered on this page. You may need to know how to perform various constructions using a pair of compasses and an unmarked ruler (a 'straight-edge'). When doing this sort of thing, you are not allowed to use any measuring equipment! You have to use the compasses to do the measuring...

Constructions: The drawing of various shapes using only a pair of compasses and straightedge or ruler. No measurement of lengths or angles is allowed. The word

construction in geometry has a very specific meaning: the drawing of geometric items such as lines and circles using only compasses and straightedge or ruler.

Place the compass at one end of line segment. Adjust the compass to slightly longer than half the line segment length. Draw arcs above and below the line. Keeping the same compass width, draw arcs from other end of line.

Construction

There are many other ways to do constructions, but the compass and

straightedge were chosen as one set of tools that make a construction challenging, by limiting what you are allowed to do, just as sports restrict what you can do (e.g. touching but not tackling, or tackling but no nuclear weapons) in order to keep a game interesting. Other tools could have been chosen instead; for example, geometric constructions can be done using origami.

How to construct an Angle Bisector (halve the angle) using just a compass and a straightedge .
Geometric Constructions.

Angle Bisector Construction

Geometric constructions, also called Euclidean constructions after the ancient Greek mathematician Euclid, are geometrically correct figures that are drawn using only a compass and a straightedge. In creating a geometric construction, measurements of angles and lines are not taken, and rulers are not used except as straightedges.
