General rule is, get the room’s square footage by multiplying the room length and room width in feet. Look for ceiling fan sizes that are designed to cool a room of your dimensions. Most ceiling fan manufactures will clearly label their fan with blade span and might even give you a recommendation on the room size they should be used in.

Fan Engineering has been written as a handbook for engineers who use fans. It is organised into four parts. Part I deals with fundamental topics. Although these topics are generally treated in other handbooks, they are presented here for the convenience of the reader. Each subject has a bearing on fans or fan applications. Part II is about fans. Although there is some discussion of fan design, both aerodynamical and mechanical, the emphasis is on those topics which should concern the user.

An axial fan is a type of fan that causes gas to flow through it in an axial direction, parallel to the shaft about which the blades rotate. The flow is axial at entry and exit. The fan is designed to produce a pressure difference, and hence force, to cause a flow through the fan. Factors which determine the performance of the fan include the number and shape of the blades. Fans have many applications including in wind tunnels and cooling towers. Design parameters include power, flow rate, press

Vent-Axia Ventilation Design GuidelinesIntroduction. 18 T: 0844 856 0590. Successful Planning. Today, people are becoming increasingly aware of the problems of indoor pollution and the important contribution that well-planned ventilation makes to modern living. Effective ventilation is now regarded as a necessity because no-one can feel their best or work efficiently in air that contains smells, smoke, moisture or excessive heat.

To measure baseline performance, we collect data from the existing fan. Figure 2 shows a normal distribution fit to the data. The mean airflow for our existing fan is 842 ft³ per minute with a standard deviation of ± 2 ft³ per minute. Because this baseline performance does not meet our requirement of 875 ft³ per minute, we need to determine which design variables can be adjusted to improve ...
