Abstract The lectures provide an introduction to basic results in the thermodynamics and kinetics of nucleation and to some applications of the theory. The thermodynamic considerations are focused on the supersaturation dependence of the nucleus size and the nucleation work. The kinetic considerations show how the general formula for the

nucleation rate is obtained in the scope of the generally accepted molecular model of nucleation.

Nucleation Theory Lecture Notes In Physics

Classical nucleation theory is the most common theoretical model used to quantitatively study the kinetics of nucleation. Nucleation is the first step in the spontaneous formation of a new thermodynamic phase or a new structure, starting from a state of metastability. The kinetics of formation of the new phase is frequently dominated by nucleation, such that the time to nucleate determines how long it will take for the new phase to appear. The time to

nucleate can vary by orders of magnitude, fr
