Unit Operation For Chemical Engineering

In chemical engineering and related fields, a unit operation is a basic step in a process. Unit operations involve a physical change or chemical transformation such as separation, crystallization, evaporation, filtration, polymerization, isomerization, and other reactions. For example, in milk processing, homogenization, pasteurization, and packaging are each unit operations which are connected to create the overall process. A process may require many unit operations to obtain the desired product.

Unit Operations of Chemical Engineering - Wikipedia

The unit operations involved in drying of parts have little in common with those involved in cleaning of parts. Different engineering fundamentals are involved. The unit operation of drying presents more challenge to achieve a certain level of quality than does rinsing or cleaning. The popular definition of drying is evaporation of a liquid.

Unit Operations - an overview | ScienceDirect Topics

In the same way that a complex plant can be divided into basic unit operations, so chemical reactions involved in the process industries can be classified into certain groups, or unit processes (e.g., polymerizations, esterifications, and nitrations), having common characteristics. This classification into unit processes brought rationalization to the study of process engineering.
