Definition. The limit of $f(x)$ as x
 approaches a is L provided that .
 choosing $\epsilon > 0$, indicating that we want
 the distance between $f(x)$ and L to be
 less than ϵ ; we can find $\delta > 0$; so that if
 the distance from x to a is less than δ
 but not equal to 0; then the distance
 from $f(x)$ to L will be less than ϵ .

And you can see it visually just by drawing the graph. As g gets closer and closer to 2, and if we were to follow along the graph, we see that we are approaching 4. Even though that's not where the function is, the function drops down to 1. The limit of g of x as x

approaches 2 is equal to 4.

We could find the limit of g of x as x approaches π . So π is right around there. As x approaches π from the left, we're approaching that value which just looks actually pretty close to the one we just thought about. As we approach from the right, we're approaching that value. And once again in this case, this is

gonna be equal to g of π .
