Schwann cells are involved in many important aspects of peripheral nerve biology, the conduction of nervous impulses along axons, nerve development and regeneration, trophic support for neurons, production of the nerve extracellular matrix, modulation of neuromuscular synaptic activity, and presentation of antigens to T-lymphocytes.

Schwann cell - Assignment Point

Renaissance physicians described peripheral nerves as passive conduits for the “life fluid” of the body. Although we now have a modern grasp of electrophysiology and action potentials, the peripheral nervous system is still seen as the passive transmission pipelines for information heading to the all-important brain.
