numerical parameter λ is introduced in front of the integral for reasons that will become apparent in due course. We shall mainly deal with equations of the second kind. Series solutions One fairly obvious thing to try for the equations of the second kind is to make an expansion in λ and hope that, at least for small enough values, this might converge. To illustrate the method let us begin with a simple Volterra equation, $\phi(x)=x+\lambda\phi(s)ds$ $0 \leq x \leq 1$. For small λ , $\phi \approx$
