A New Multi Wavelength- Optical Code Division Multiple ...

Optical code division multiplexing (OCDM) is an alternative method. A proper choice of optical codes allows signals from all connected network nodes to be carried without interference between signals. Simultaneous multiple access can thus be achieved without a complex network protocol to coordinate data transfer among the communicating nodes .

Optical code division multiplexing (OCDM) and its ...

In fiber-optic communications, wavelength-division multiplexing (WDM) is a technology which multiplexes a number of optical carrier signals onto a single optical fiber by using different wavelengths (i.e., colors) of laser light. This technique enables bidirectional communications over one strand of fiber, as well as multiplication of capacity.. The term WDM is commonly applied to an optical ...
