Active CWDM/DWDM solutions are stand-alone AC or DC powered systems separated from the switch. The task of the stand-alone system is to take the short-range optical output signal of the fiber or IP switch and convert it to a long-range xWDM signal. This OEO, (optical to electrical to optical), conversion is handled by a transponder.

DWDM (Dense Wavelength Division Multiplexing) 100GHz spacing (even channels) Up to 40 Wavelength channels can be transported over a dark fi ber network in the so called C-Band. An additional 40 channels are available in the L-Band but these are usually not used, due to diffi culties in amplifi cation and excessively long leadtimes.

CWDM & DWDM - Smartoptics

The two key WDM technologies are coarse wavelength division multiplexing, CWDM and dense wavelength division multiplexing, DWDM. Which solution is best suited to a given environment depends on the network and user requirements. CWDM supports up to 18 wavelength channels transmitted through a fiber at the same time.
