Digital Phase Lock Loops Architectures

This exciting new book covers various types of digital phase lock loops. It presents a comprehensive coverage of a new class of digital phase lock loops called the time delay tanlock loop (TDTL). It also details a number of architectures that improve the performance of the TDTL through adaptive techniques that overcome the conflicting requirements of the locking range and speed of acquisition.

A phase-locked loop or
phase lock loop is a
control system that
generates an output
signal whose phase is

related to the phase of
an input signal. There
are several different
types; the simplest is
an electronic circuit
consisting of a variable
frequency oscillator
and a phase detector
in a feedback loop. The
oscillator generates a
periodic signal, and the
phase detector
compares the phase of
that signal with the
phase of the input
periodic signal,
adjusting the oscillator
to keep the phases mat
