Math Pythagorean Theorem

It is called "Pythagoras' Theorem" and can be written in one short equation: $a^2 + b^2 = c^2$. Note: c is the longest side of the triangle; a and b are the other two sides ; Definition. The longest side of the triangle is called the "hypotenuse", so the formal definition is:

Pythagoras Theorem - MATH

The Pythagorean Theorem shows the relationship between the sides of a right triangle. It states that for a right triangle, the sum of the areas of the squares formed by the legs of the triangle equals the area of the square formed by the triangle's

hypotenuse. This is expressed as: $a^2 + b^2 = c^2$

Pythagorean Theorem - Math

In mathematics, the Pythagorean theorem, also known as Pythagoras's theorem, is a fundamental relation in Euclidean geometry among the three sides of a right triangle. It states that the area of the square whose side is the hypotenuse (the side opposite the right angle) is equal to the sum of the areas of the squares on the other two sides.

Pythagorean theorem - Wikipedia

The theorem states that the length of the hypotenuse squared is equal to the length of side a squared plus the length of side b squared. Written as an equation, $c^2 = a^2 + b^2$. Thus, given two sides, the third side can be found using the formula.

Pythagorean theorem - Basic Mathematics

The Pythagorean Theorem helps us to figure out the length of the sides of a right triangle. If a triangle has a right angle (also called a 90 degree angle) then the following formula holds true: $a^2 + b^2 = c^2$. Where a, b, and c are the lengths of the sides of the triangle (see the picture) and c is the side opposite the right angle.
