Database operations are either simple or composite. A simple database operation is a single SQL statement or PL/SQL procedure or function. Monitoring of a simple operation starts automatically when a SQL statement runs in parallel, or when it has consumed at least 5 seconds of CPU or I/O time in a single execution.

Monitoring Real-Time Database Operations

Enterprises across all industries are answering the call to move their business infrastructure, and with that their databases, to the cloud. They are flocking to fully managed cloud databases like Cloud SQL to leverage

their unparalleled reliability, security, and cost-effectiveness. Today, we're launching the new serverless Database Migration Service (DMS) as part of our vision at Google ...

abstract SQL operations. For a real case query based on the TPC-DS query3 benchmark, the FPGA runs 55 times faster than a 12-core server. FPGAs are an attractive option for accelerating different database systems. FPGAs provide big amounts of flexibility in a

relatively cheap package that can be exploited by the

Accelerating database systems using FPGAs: A survey

Query acceleration supports an ANSI SQL-like language for expressing queries over blob contents. The query acceleration SQL dialect is a subset of ANSI SQL, with a limited set of supported data types, operators, etc., but it also expands on ANSI SQL to support queries over hierarchical semi-structured data formats such as JSON.

Query acceleration SQL language reference - Azure Storage ...

Database operations are either simple or composite. A simple database operation is a single SQL statement or PL/SQL

procedure or function. A composite database operation is activity between two points in time in a database session, with each session defining its own beginning and end points. A session can participate in at most one composite database operation at a time.
