Among processes contributing to microbial enhancement of water-flood-driven oil recovery, which have been intensely studied and well-reviewed, one could mention oil-water interfacial tension (IFT) reduction, rock wettability alterations, oil and water viscosity and mobility alterations, selective rock pore/channel plugging and some others (Gray et al., 2008; Youssef et al., 2009). Novel approaches to microbial enhancement of oil recovery ...

Microbial enhanced oil recovery represents a three-pronged attack.

First, the microorganisms break down crude oil, reducing its viscosity. It's a lot easier to drive it hundreds of feet upward if flows more like water than maple syrup. The second method is displacement.

Microbial Enhanced Oil Recovery (MEOR) is one of the technologies that can be potentially implemented with an exceptionally low operating cost: It has several advantages compared to conventional EOR processes as it does not consume large amounts of energy as do thermal processes, nor does it depend on the oil price as do many chemical processes.

Developments in Petroleum Science | Microbial enhancement ...

Microbially enhanced oil recovery (MEOR) is a promising approach for improving oil recovery for viscous deposits. MEOR can be achieved using either ex situ approaches such as flooding with microbial

biosurfactants or injection of exogenous surfactant-producing microbes into the reservoir, or by in situ approaches such as biostimulation of indigenous surfactant-producing microbes in the oil.

MEOR mechanisms are the same mechanisms obtained from other chemical enhanced oil recovery (EOR) methods; however, MEOR presents the advantage that microbial metabolites are directly produced in the reservoir rock

formation, which makes them more effective. Furthermore, microorganisms metabolize different hydrocarbons at different rates [6].

Tertiary recovery is also known as enhanced oil recovery (EOR), which includes polymer flooding, surfactant flooding, gas flooding, thermal production, and microbial enhanced oil recovery (MEOR). The EOR process has two basic features: (a) effectiveness of recovery of more oil and (b) relatively low cost.
